SmarTone extends 4.5G coverage to the new South Island Line today

Additional 2100MHz spectrum deployed to significantly enhance the customer experience across all MTR lines

(Hong Kong, 28 December 2016) – SmarTone today announced that it has extended its 4.5G network coverage to the new South Island Line, including Ocean Park, Wong Chuk Hang, Lei Tung and South Horizons stations. SmarTone has also expanded its LTE network capacity by aggregating existing 900MHz, 1800MHz, 2600MHz spectrum and the additional 2100MHz spectrum on the MTR to bring customers an even faster, smoother and more stable mobile experience.

“MTR is a key mode of public transport in Hong Kong and there is a robust demand for data usage when customers are travelling on the MTR,” said Mr. Stephen Chau, Chief Technology Officer at SmarTone. “As we are always dedicated to bringing the best online experience to our customers wherever they go, we have been significantly investing resources and technology in expanding our powerful 4.5G network to provide an even more superior mobile network experience to our customers.”
